I'm creating a data cleaning exercise and would like a naturally-created, really messy dataset. Please help me by filling out this form about your pet's name. No need to try to make the data more chaotic than it will be; just answer normally. Thanks! forms.gle/NaQBxiR7wxX7F7...

BTW - I will share this dataset on github in the next couple days so anyone can use it for their own exercises!

This data is already delightful. We have a Pumpkin and a Peter Peter Pumpkin Eater, so Pumkin best watch herself!

Pumpkin

Peter Peter Pumpkin Eater

A SERVER IS NOT A PET!

What kind of pet is this (Dog, Cat, Bird, Other)

Replying to @jengolbeck

Current name winner is a fish named "Vitale Male the hot tamale who has a cooking show with Mario Batale" (Vitale for short)

Thank you to everyone who contributed to my Pet Name dataset! It is messy as can be and perfect for data cleaning and other data science exercises! You can find it at [github.com/jgolbeck/petna...](https://github.com/jgolbeck/petna) and browse the responses at docs.google.com/spreadsheets/d...

Obviously a server isn't a pet. It's a beast of burden.

Obviously you've never had a server adopt yourself as its human.
